

Discs on the Exe – Poster List

Protoplanetary disc formation, clusters and Class 0/I discs

#	Author	Poster title
1	Megan Allen	The photo-evaporation of protoplanetary discs in young stellar clusters
2	Sarah E. Anderson	Dust Disk Evolution and Planetesimal Formation Under an Early Inflationary Phase
3	Matthew Bate	Dust growth and dynamics during star and disc formation
4	Matt Cusack	The Impact of Radiation Environment on the Evolution and Fragmentation of Protostellar Discs
5	Blake Drechsler	Molecular Line Radiative Transfer Modeling of C18O toward L1527IRS and the eDisk Protostars
6	Vardan Elbakyan	From Cloud to Core: Early Dust Enrichment in Forming Disks
7	Fabiola Antonietta Gerosa	Insights into early stages of disk evolution
8	Andrej Hermann	Generating magnetic fields in self-gravitating accretion discs
9	Noa Hoffmann	The effect of MHD winds on the fragmentation of early protostellar disks
10	Rajika Kuruwita	How low-mass main-sequence fast-rotators accrete their spin from their circumstellar discs
11	Rajika Kuruwita	Attempting to find the origin of FUor bursts starting from ISM scales
12	Ankush Mandal	A Highly Efficient Poisson Solver for Self-Gravity in Global Simulations of Astrophysical Disks
13	Lin Qiao	Disc evolution and multi-planetary system formation in stellar cluster environments
14	Pratishtha Rawat	Triggered Fragmentation in Self-Gravitating Protoplanetary discs: Cooling, Mass Movement and Instability
15	Sahl Rowther	How Does The Star-Forming Environment Impact Planet Formation?
16	Oliver Schib	DIPSY: A new Disc Instability Population SYnthesis
17	Howard Cohl	Elliptic Integral Analysis of Lower and Upper Self-Adjoint Sequences in Riemann S-Type Ellipsoids

Protoplanetary disc structures and their evolution

#	Author	Poster title
1	Stefan Adelbert	On the global mass distribution of primordial planetesimals with DustPy
2	Antoine Alaguero	Where do grains grow (or not) in binary systems? A 3D hydrodynamical approach
3	Leah Albrow	Fine-tuning Vision Foundation Models for Protoplanetary Disc Science
4	Juanita Antilen	Analysis of the limitations of the gap contrast method to infer the level of vertical diffusion using dust evolution models
5	Naman Bajaj	From Disk Evolution to Dispersal: Mapping Protostellar Outflows Across 70 Class II Systems with JWST/MIRI
6	Clement Baruteau	Synthetic observables with VLTI of dust asymmetries in the inner parts of circumbinary discs
7	Shridharan Baskaran	A Unified View of Disk Evolution: Mapping the Accretion-Ejection Engine with JWST/MIRI
8	Cade Burgy	A closer look at the WISPIT 2 host star. Evidence for a spectroscopic binary
9	Josh Calcino	Infall Driven Substructures in Protoplanetary Discs
10	Ethan Carter	The effect of metallicity on disc fragmentation
11	Akke Corporaal	Spatially resolving the inner regions of circumstellar discs around young and evolved stars
12	Sreejita Das	Dust characterization of halos - The extended emission in protoplanetary disks
13	Anuroop Dasgupta	Inner Disk Structure of Herbig Ae/Be Stars: A Volume-Complete Near-Infrared Interferometric Survey
14	Toon De Prins	Here be substructures: a VLTI/PIONIER view of the inner rims of dusty post-AGB discs
15	Timmy Delage	Formation of planetary cores during the secular evolution of magnetized protoplanetary disks
16	Kiyoaki Doi	Dust Properties of the HD 163296 Disk from High-Resolution Multi-Wavelength Observations Including ALMA Band 9 (0.45 mm)
17	Carsten Dominik	Coagulation and processing of PAHs in disks
18	Juliana Ehrhardt	HD98800: probing dust and gas properties using transit observations in a hierarchical quadruple system
19	Vardan Elbakyan	Seeing Through the Dust: Biases in Disk Mass and Radius Measurements
20	Simeo Evelain	What causes the dust's asymmetric emission in the inner parts of protoplanetary disks seen by the VLTI ?
21	Daniele Fasano	The Circumbinary Disc of HD 34700A II. Analysis of a strong dust asymmetry
22	Anna Fehr	Joint Modeling of Multi-Resolution Continuum Data in Protoplanetary Disks
23	Olcay Ates Goksu	Parameter Study of Dust Growth And Streaming Instability Onset In Wind-Driven Disks
24	Cassandra Hall	Kinematic evidence of gravitational instability
25	Tao Ji	Gas and dust evolution in disks around Very Low Mass Stars
26	Carolin (Lina) Kimmig	Following the footprints of warps: kinematics as a tracer
27	Naoya Kitade	Scattering-Induced Biases in Dust Mass and Temperature Estimates of Protoplanetary Disks
28	Taylor Kutra	Contextualizing Circumstellar Disks in Close Young Binaries
29	Cat Leedham	Collision velocities of dust grains in gravitationally unstable discs
30	Mathis LETESSIER	Near and mid-infrared study of the inner disk of the TTauri "dipper" star RY Lup with Optical Interferometry

#	Author	Poster title
31	Zhixuan Li	Dust coagulation at water snowline of Protoplanetary disk
32	Zhe-Yu Daniel Lin	Identifying the Streaming Instability in Protoplanetary Disks from (Sub)millimeter Dust Polarization Following the Badminton Birdie-like Aerodynamic Alignment
33	Lilian Luo	Where are the dust rings? Dust evolution models of outer gas pressure bumps in exoALMA disks
34	Jie Ma	Misalignment and Dust Evolution in the Edge-on Flying Saucer Revealed by JWST
35	Ezequiel Manzo-Martinez	Modeling the curved dust sublimation front in protoplanetary disks: a potential probe of midplane turbulence
36	Melissa McClure	Trapper keepers: Measuring the efficiency of disk solid retention against radial drift
37	Farzana Meru	Gravitationally unstable discs delay the radial drift of dust
38	Katie Milsom	Two precessing annuli produce broad shadows in protoplanetary discs: observations and modelling of HD 139614
39	Subhanjoy Mohanty	Global, Time-Dependent, 2D Simulations of Gas+Dust Evolution in the Inner Disc
40	Chris Ormel	Dust and water in V883 Ori: Relics of a retreating snowline
41	Viviana Pezzotta	Extending dynamical mass measurements: probing GI as a possible origin of mm-dust spirals
42	Vasundhara Prasad	Kinematics Signatures of Stellar Flybys in Protoplanetary Disks
43	Colette Salyk	Photospheres and Inner Disks at 5-10 Myr: MRS observations of Upper Sco disks
44	Maria Semerkina	Dust Clumping in Protoplanetary Disks
45	Patrick Sheehan	pinball-rt: Radiative Transfer at Warp Speed
46	Benjamin Silk	Neural Differential Equations for Dust Coagulation in Hydrodynamical Simulations
47	Lucas Stapper	A census of Herbig disk masses
48	Sophia Stasevic	Comparing high-contrast imaging analysis techniques in retrieving fine structures in total intensity disc observations
49	Callista Sullivan	Can Simulation-Based Inference Reshape the Search for Structured Protostellar Discs?
50	Joseph Tang	High-resolution ALMA imaging of the externally perturbed disk, WW Cha
51	Maxime Tanious	Streamers impact on protoplanetary disks
52	Maya Tatarelli	Dust Dynamics in Disk Pressure Bumps and Late Planetesimal Formation
53	Terrence Tricco	Accuracy improvements for accretion disc magnetic fields using smoothed particle magnetohydrodynamics
54	Marion Villenave	Observational constraints on dust concentration and planetesimal formation in protoplanetary disks
55	Lukas Welzel	The Fast & Fourier: No More Waiting for Radiative Transfer
56	David Wilner	A Millimeter Survey for Disks around Herbig Be Stars
57	Elizabeth Yunerman	Icy Volatile Enhancements in Evolving Protoplanetary Disks: The Role of Entrapment
58	Remi ZERNA	Measurements, simulations and characterization of protoplanetary dust analogs scattering properties

Disc chemistry

#	Author	Poster title
1	Tayt Armitage	Searching for Inner Disk Pebble Drift with JWST Spectra of HD 163296
2	Camille Bergez-Casalou	Impact of accretion variability on the CO emission of a disk around a very-low-mass star with JWST
3	Jelke Bethlehem	The molecular composition of the dust depleted inner disk
4	George Blaylock-Squibbs	Chemistry of Gravitational Instability Planets
5	Alice Booth	Characterizing the Chemical Landscape of Giant Planet Formation
6	Jenny Calahan	How Dust Dynamics and Chemistry Shape the Water Reservoir
7	Pacome Esteve	First constraints on elemental abundances in inner T Tauri disks from thermochemical models
8	Coralie Foucher	Study of the vertical and radial structure of edge-on protoplanetary disks
9	Danny Gasman	CO ₂ and its isotopologues: can we trace inner disk enhancement due to drifting ices?
10	Natalie Green	Disc chemistry across star-forming regions from molecular column densities
11	Jude Hammond	Understanding Ice Transport Processes in the Externally Photoevaporated Protoplanetary Disc XUE 10
12	Claudio Hernandez-Vera	The ALMA Disk-Exoplanet C/Onnection (DECO): A statistical study of H ₂ CO in T Tauri protoplanetary disks
13	Cora Hoppe	HDCO detection and D/H ratio in edge-on Class II protoplanetary disks
14	Adrien Houge	How leaky? Revising the impact of outer dust traps on the composition of the inner protoplanetary disc in the context of JWST
15	Zuzanna Jonczyk	Bridging the Gap: Vertical Chemical Structure in Protoplanetary Disks
16	Till Kaeufer	Inside the water snowline: Connecting disk evolution to JWST spectra
17	Luke Keyte	Chemical Signatures of External Irradiation in Protoplanetary Disks
18	Isabella Macias	Modeling CN Emission to Constrain Gas Densities in IM Lup's Disk
19	Mulan Madden	Chemical Modeling of the Innermost Regions of Protoplanetary Disks
20	Anna Miotello	Disk evolution as constrained by the DECO Large Program
21	Tamara Molyarova	Chemical evolution and dust drift in protoplanetary discs: linking models to JWST observations
22	Shota Notsu	Chemically layered structures and ionisation in the disk and envelope of NGC 1333 IRAS 4C: FAUST
23	Judd Phillips	DQ Tau: Disk Changes Across Periodic Accretion Bursts Using JWST-MIRI
24	Pablo Riviere	Molecular content in the disk and envelope of HL Tau: detection of sulfur-bearing species
25	Pablo Riviere-Marichalar	The sulfur content in protoplanetary disks

#	Author	Poster title
26	Alfie Robinson	The CO snow line is highly dynamic in thermally self-consistent simulations
27	Clara Ross	An Unbiased Chemical Inventory of Protoplanetary Disks with the SMA
28	Beth Sargent	Recent Planetesimal Disruption in the RW Aurigae Star System
29	Sofia Savvidou	Is the inner disk composition regulated by the disk and stellar properties or the existence of substructures?
30	Alice Somigliana	JWST reveals disc diversity, ice features, and extended molecular emission in the binary system HK Tau
31	Hugo T'KINDT	Chemical impact of envelope accretion onto the nascent disk in L1527
32	Estephani TorresVillanueva	Measuring accurate gas masses in planet-forming disks in Lupus
33	Sierk van Terwisga	Molecules in the shadows of HD 143006: chemistry and disk properties from simultaneous line models.
34	Marissa Vlasblom	The effects of pebble drift as seen in the inner disk with JWST-MIRI
35	Qijia Zhou	Externally Irradiated Disk Chemistry: A JWST MIRI Case Study of Proplyds in NGC 1977

Planets in discs and how they shape them

#	Author	Poster title
1	Danila Astrakhansev	The interplay between the snowline pebble flux and planet formation
2	Maciej Bajor	Protoplanetary disc structures of T Tauri stars in the visible with LBT/SHARK-VIS high-contrast imager
3	Maria de Juan Ovelar	Sandwiched Planet Formation in Action: Multiwavelength Diagnostics from NIR to Centimetre Wavelengths
4	Amena Faruqi	Observed dust ring properties as probes of planet masses
5	Emmanuel Greenfield	A slim disc model for circumplanetary disc evolution
6	Antonio Hales	Disk evolution and planet formation in the Triple HD104237 System
7	Jensen Lawrence	Reconstructing the Earliest Stages of Giant Planet Formation in Three Dimensions
8	Luke Morriss	Dust Trapping and Disc Evolution: How Giant Planet Formation Sculpts Disc Composition and Shapes Subsequent Planet Formation
9	Cory Padgett	Eccentricity and Precession in Planet-Driven Protoplanetary Disks
10	Anna Penzlin	Changing your own path: The effect of circumbinary of planet on the disc
11	Pedro Poblete	Sculpting planet-forming disks: the role of stellar flybys and gas Infall
12	Steven Rendon Restrepo	Impact of gravity modeling in thin discs: resolving numerical convergence of GI and revealing overestimation of planetary masses
13	Eleftheria Sarafidou	Eccentricity growth of gap-opening planets in self-gravitating, inviscid discs
14	Chiara Eleonora Scardoni	Reversing massive planet migration: the role of gap structure and outer Lindblad resonances
15	Kim Melanie Weiskopf	Forming multi-ring structures in protoplanetary disks with migration jumps

Protoplanetary disc dispersal

#	Author	Poster title
1	Saumya Gupta	An Observational Insight into Protoplanetary Disks: Role of Cluster Environment
2	Sasha Paine	Dust Entrainment in External Photoevaporative Winds: Theory and Observation
3	Giovanni Picogna	The dispersal of compact protoplanetary discs
4	Catherine Sarosi	Bringing the HD 141569 Transition Disk into Focus with High Resolution ALMA CO Observations
5	Sunder Singh-Bal	Photoevaporation of discs by massive binary stars
6	Gabriella Zsidi	Tracing hidden gas in the disk of RZ Psc

Debris Discs

#	Author	Poster title
1	Deniz Akansoy	DebrisPy and Secularly Driven Structures in Debris Discs
2	Raphael Bendahan-West	Searching for planets & finding discs: JWST NIRCам's sensitivity to debris discs
3	Michael Elston	Automatic exocomet detection in spectra and light curves of β Pictoris
4	Agnieszka Gurgul	Polarimetric observations of selected debris disk stars with NEOPol
5	Elisabeth Matthews	A Scorpius-Centaurus sample of scattered light debris disks
6	Karolina Szewczyk	Disc caught at the transition from protoplanetary to debris stage
